

Handover of the Leadership of PMOD Technologies

We are pleased to announce that with effect May 2022 Dr. Geoffrey Warnock has taken the chair managing director position of PMOD Technologies GmbH, a subsidiary of Bruker BioSpin.

He takes over this responsibility from Dr. Cyrill Burger, who co-founded and led the Zürich based company since 2003.

Geoff joined PMOD in 2014 as senior application scientist and has since contributed in many aspects to PMOD. His education in pharmacology and academic career involving novel PET tracer characterization and translational multimodality imaging provided an excellent foundation for further development of PMOD's toolbox.

He used his practical imaging skills, experience with data analysis in academia and pharma industry and teaching

talent to support PMOD users at all levels of their projects. Taking an active role in conferences, workshops, symposia and webinars he has been able to interact with the research community and become a prominent face of PMOD.

Geoff is determined to continue the success story of PMOD. His vision is to make PMOD even more useful to current customers, and prove its value for scientists in related research domains.
